1. body weight-related schemas are on iMeet: they will be shared with WG and presented at the next WG call
2. another draft of food entry schema

Modeling food intake as food entry (type and amount of food associated to time)
Second draft shared with subgroup and discussed

Decisions made:

- calcium, purine, vitamins not included in the list (described as non-exhaustive)
- no concept of serving as app translates into mass or volume
- allow date only (this breaks with precedent: will model then discuss)

Action items:

- revise food entry schema
- ask UCSF metabolic health and weight management experts about macro- and micro-nutrients of interest
- share weight-related schemas with WG
