

# Environmental sustainability in a digital world.

## The CODES Action Plan for a Sustainable Planet in the Digital Age

David Jensen, 20 September 2022  
Coordinator, Digital Transformation  
Planet Positive 2030, IEEE

# Anyone ever wondered what it must be like to be the Secretary General of the UN ?

“I am deeply convinced that there is no other way to deal with global challenges, than with global responses.”

António Guterres  
Secretary-General of the United Nations

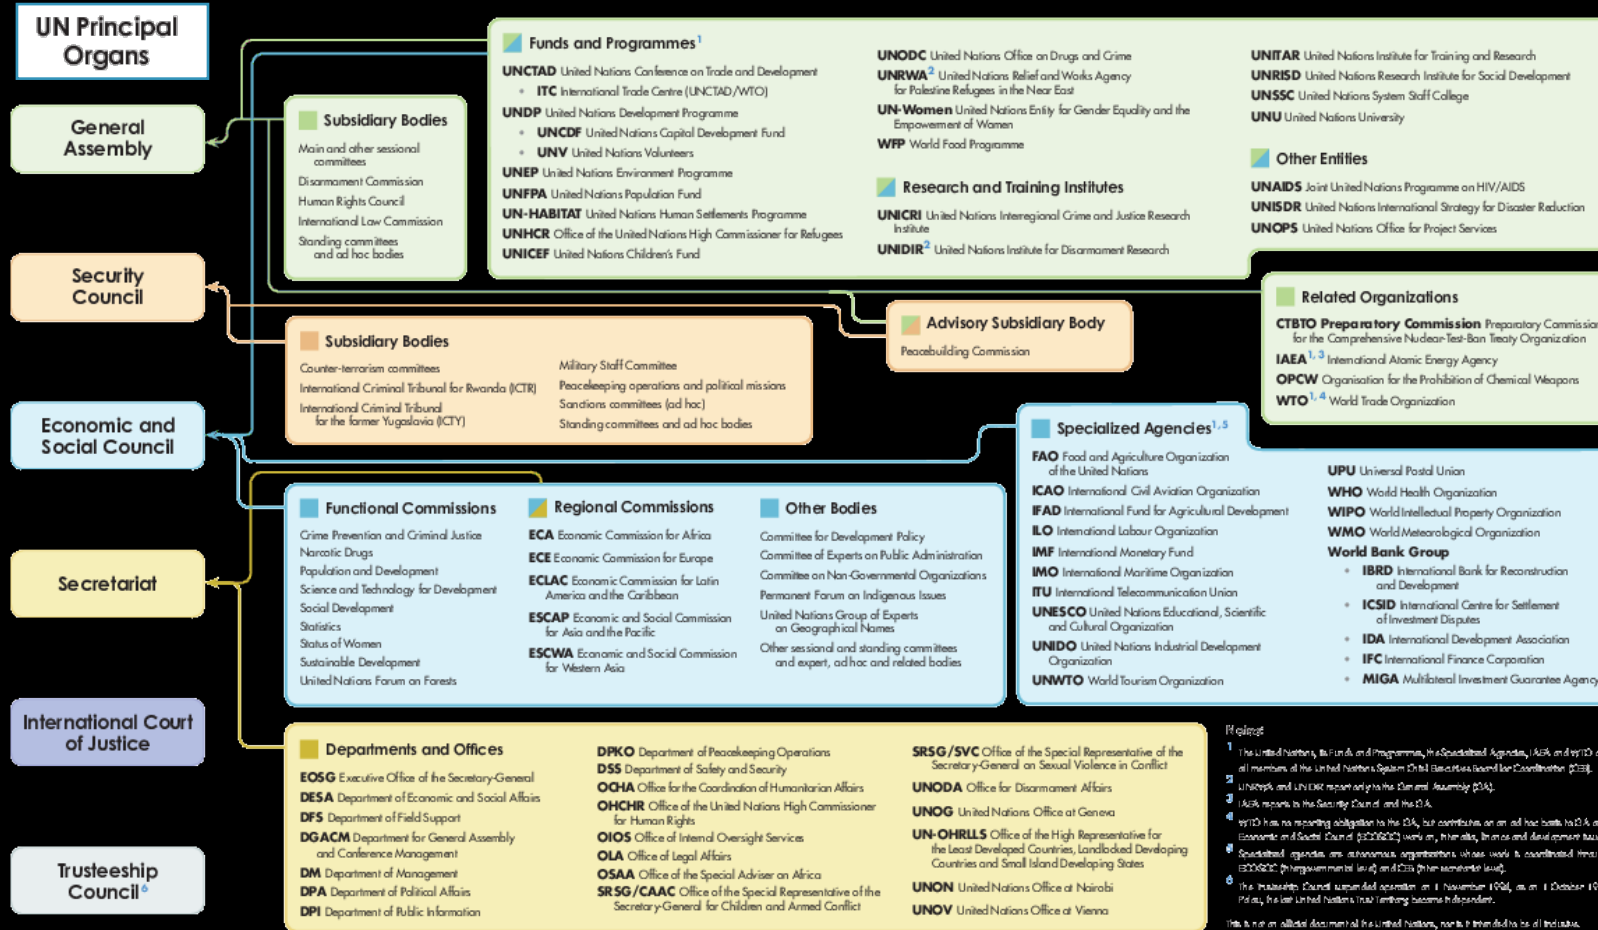

António Guterres

Use this (40+ UN funds, programmes):

## The United Nations System

To work with this (193 countries and SH)

To achieve this (169 targets):

# Of everything on his agenda, what global issue keeps him awake at night?

Digital transformation:

1. Speed & Scale
2. Direction
3. Resource consumption

Accelerating or solving ?

Triple planetary crisis:

1. Climate change
2. Nature loss
3. Pollution

# We are at a pivotal moment in human history:

Digital technologies are fundamentally changing the way we live, work, learn & relate to each other

Human Behavior  
**8000 Days**  
of screen time  
21 years of our life

Economic Transactions  
**60%**  
of economy passes  
through digital channels

Social Relationships  
**4 Billion**  
people connected  
on social media

The global march of digital technologies is also fundamentally disrupting every economic sector and business model on the planet

Information

Food

Transport

Energy

Materials

This is could be the **single greatest window of opportunity** to achieve the kinds of systemic changes needed for environmental sustainability and climate action.

**We now have a fundamental choice to make between two future pathways: :**

**Green digital future &  
competitive sustainability**

Digital technologies accelerate sustainable production, consumption and a circular economy.

**Acceleration of triple  
planetary crisis**

Digital technologies accelerate resource consumption, inequality and social division.

*“Harnessing the power of digital transformation for environmental sustainability will require unprecedented leadership and collaboration across governments, companies and civil society.*

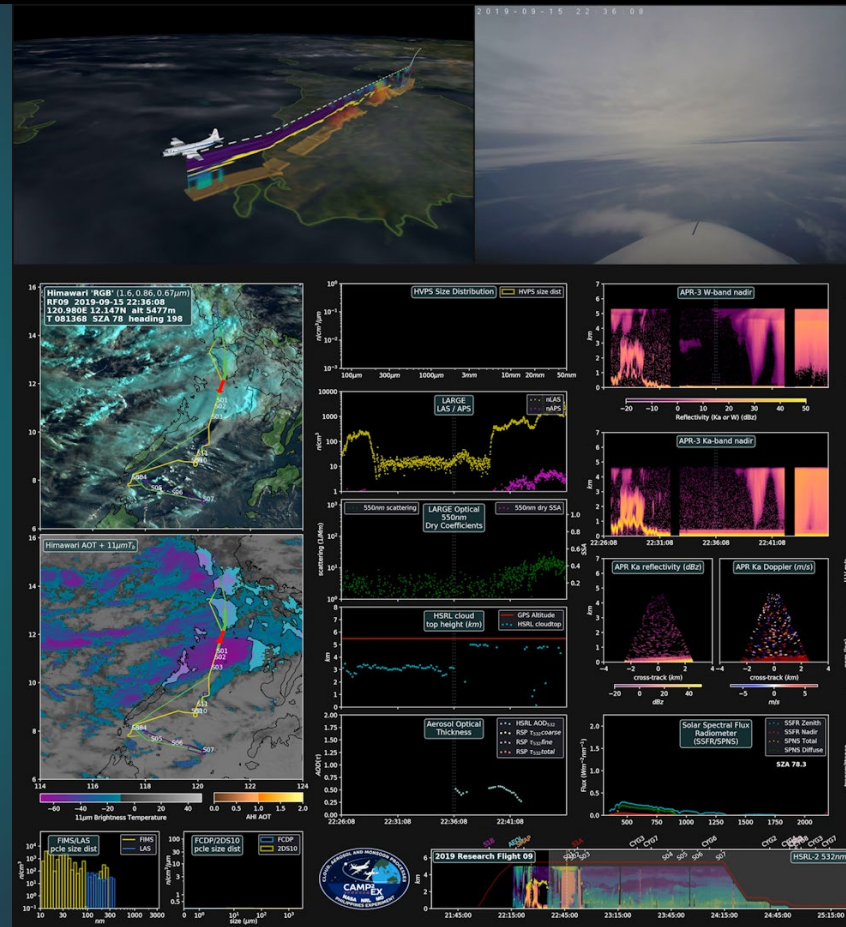

*Completely new forms of collective action, stakeholder collaboration and multilateralism are needed to solve the five hard problems of environmental sustainability.”*

Inger Andersen, UNEP Executive Director

# What are the “Five Hard Problems” of environmental sustainability & climate action that digital transformation can solve by 2030?

- Monitoring key ecological trends and high value variables
- Near real time progress indicators for environmental commitments
- Sharing solution pathways

## 1. Monitoring and modelling environmental systems and emissions at global level

# What are the “Five Hard Problems” of environmental sustainability & climate action that digital transformation can solve by 2030?

- Tracking and tracing of all inputs and impacts across supply chains using digital product passports
- Accurate calculation of environmental and carbon footprints
- Digital disclosure of performance to enable comparability
- Basis for more robust ESG calculations

**2. Full supply chain transparency and disclosure of environmental value**

# What are the “Five Hard Problems” of environmental sustainability & climate action that digital transformation can solve by 2030?

Use of SMART systems in key sectors:

- Energy, buildings, agriculture, mobility, manufacturing
- 20% reduction in GHG emissions

**3. Automated sustainability decisions and optimization of natural resources**

# What are the “Five Hard Problems” of environmental sustainability & climate action that digital transformation can solve by 2030?

- Decentralized decision making
- Citizen science
- Collaborative governance
- Automated enforcement

**4. Agile and participatory environmental governance** processes, services and enforcement

# What are the “Five Hard Problems” of environmental sustainability & climate action that digital transformation can solve by 2030?

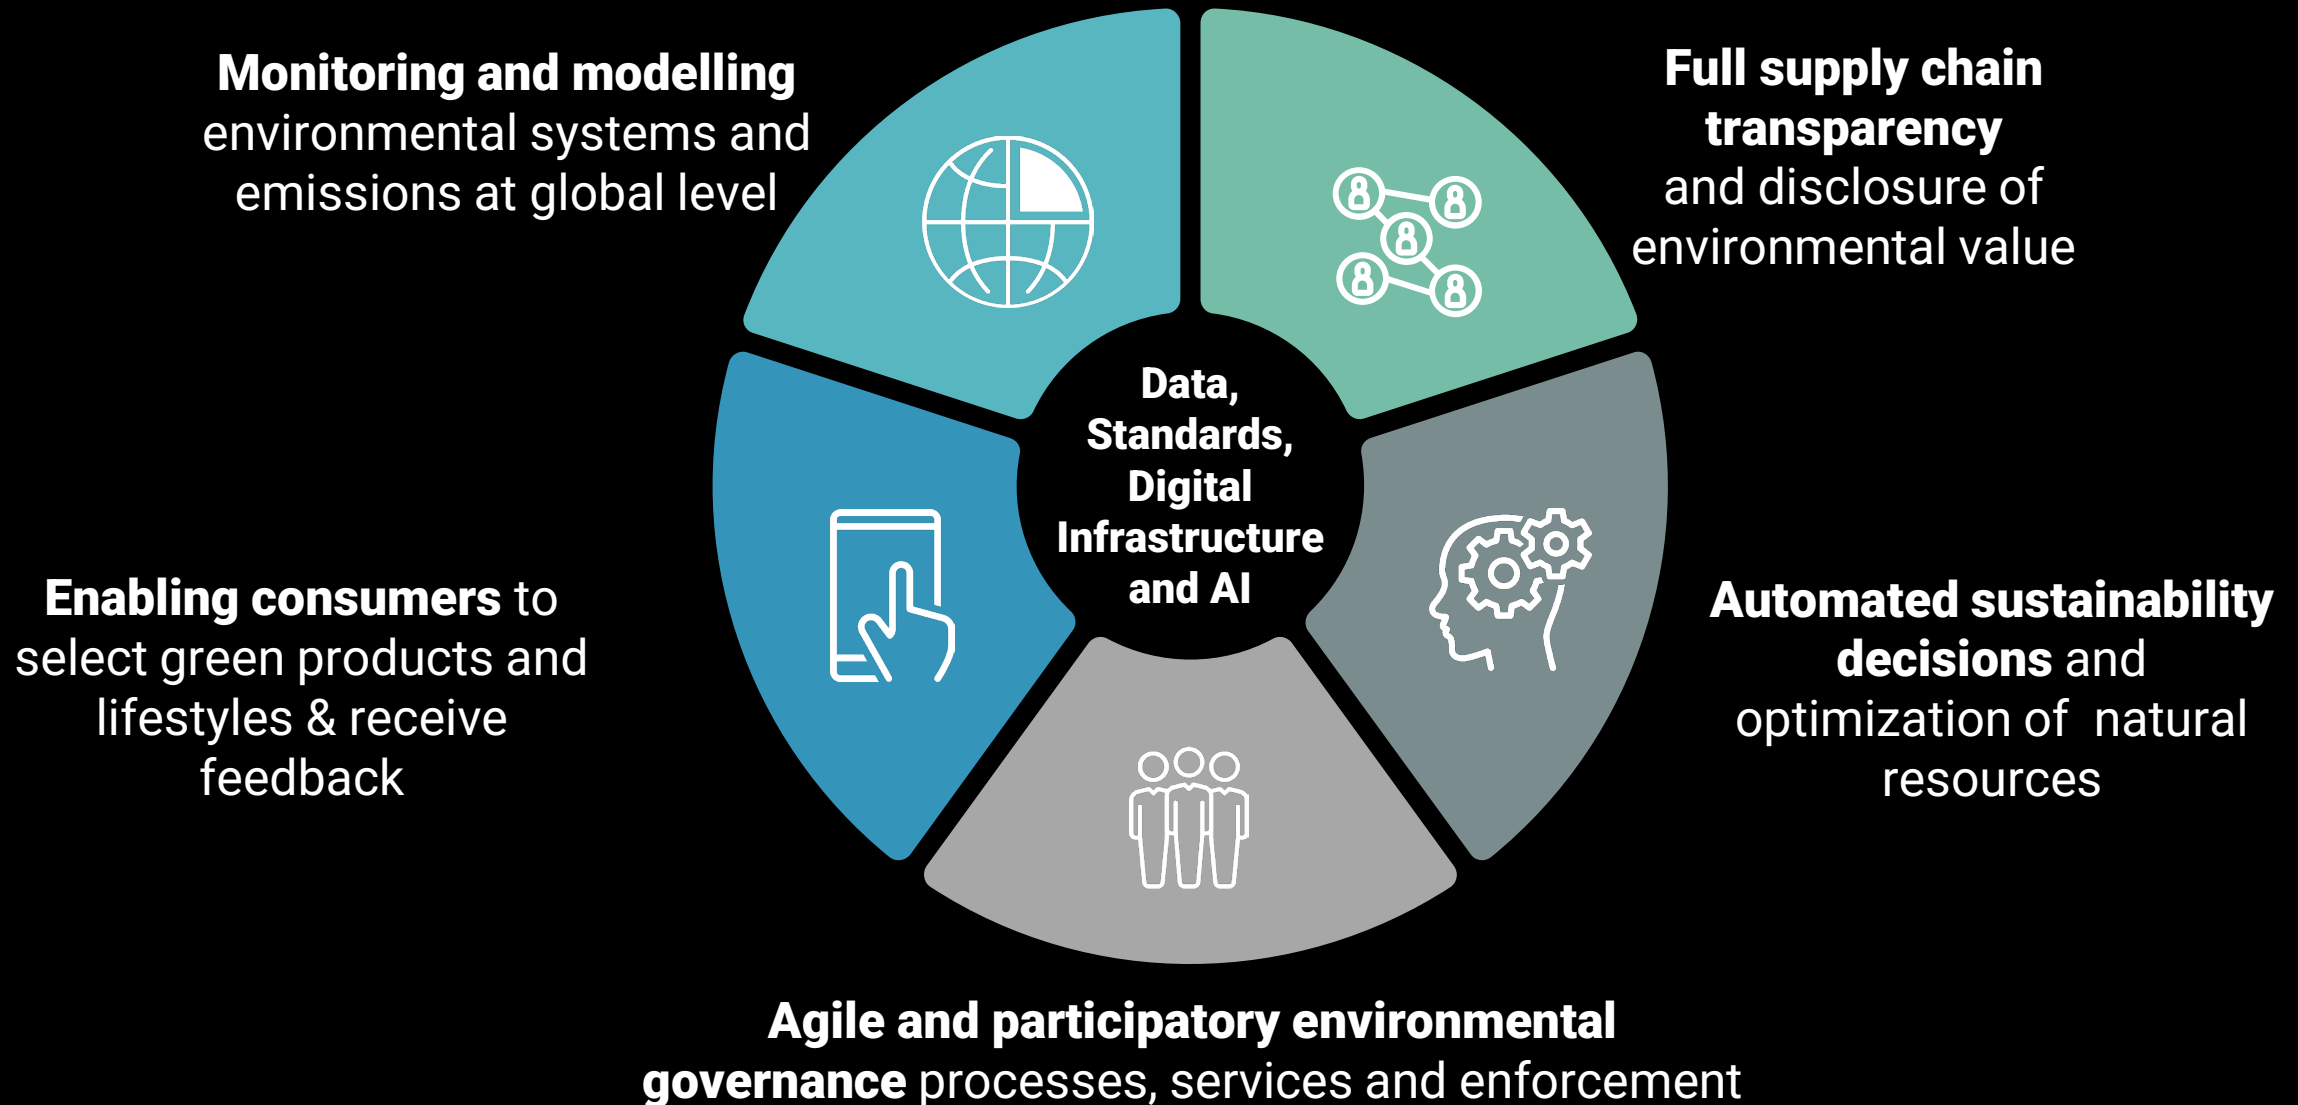

Green recommendations, activations, and social norms:

- 4 billion on social media
- 2.5 billion on gaming platforms
- 2 billion on e-commerce

**5. Enabling consumers to select green products and lifestyles & receive feedback**

# The “Five Hard Problems” of environmental sustainability & climate action that digital transformation can solve by 2030

# How can the UN help to unite digital transformation and environmental sustainability into a “twin transition” as part of the Roadmap for Digital Cooperation?

# CODES

## COALITION FOR DIGITAL ENVIRONMENTAL SUSTAINABILITY

Founded in March 2021

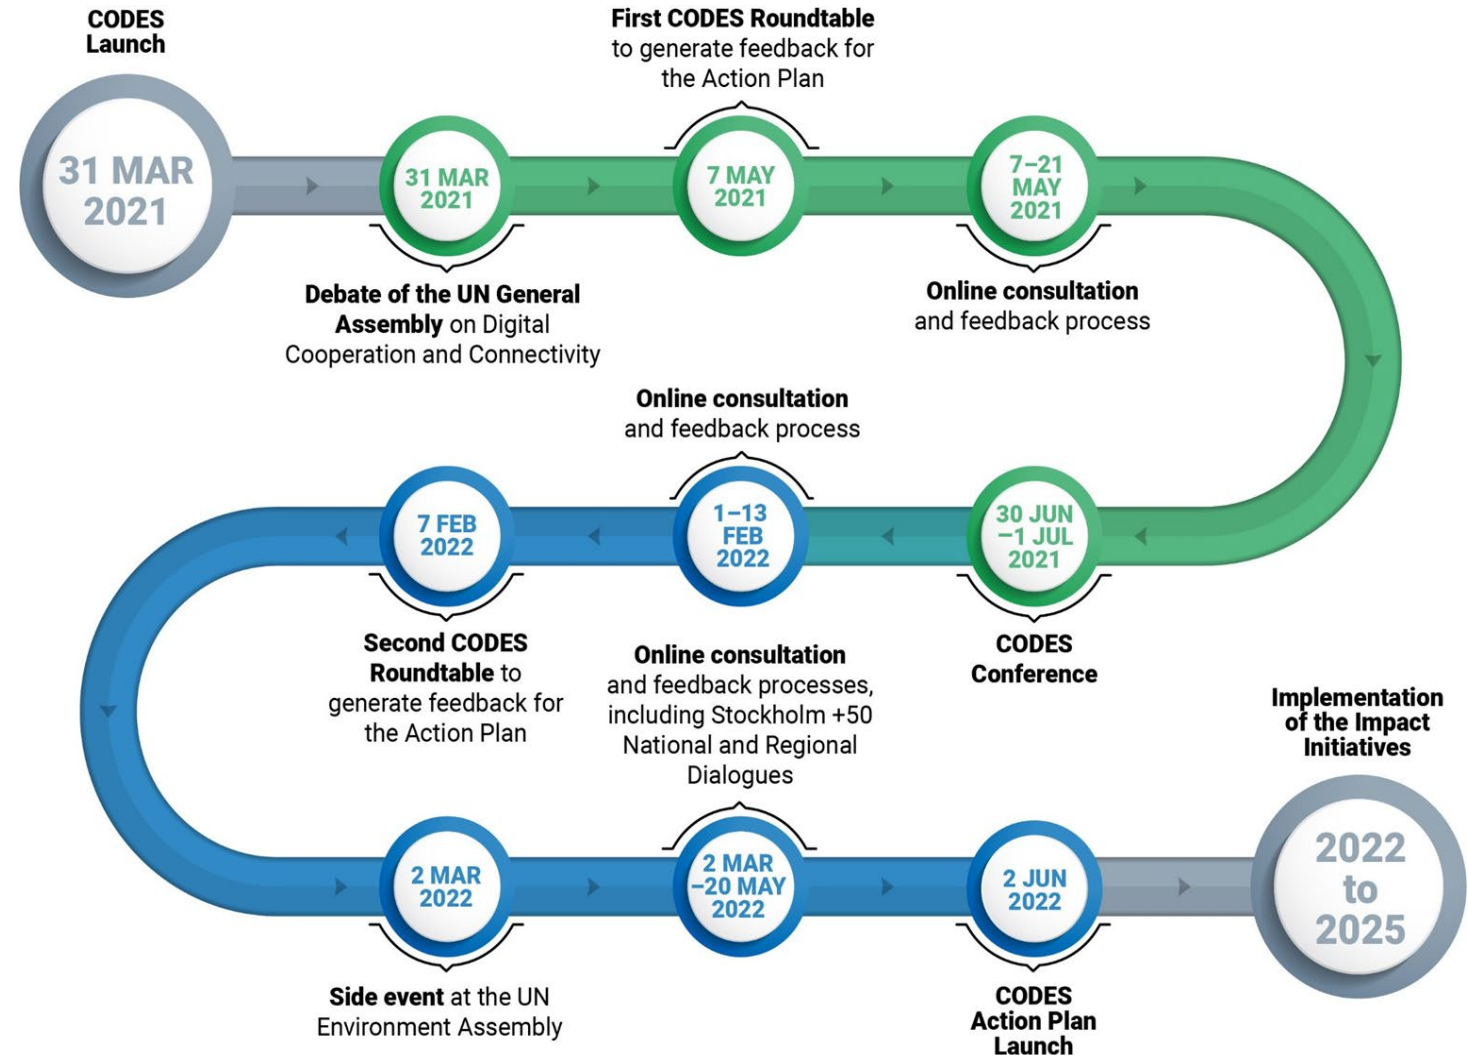

# CODES Action Plan: co-design process with 1,000 CODES stakeholders from 100 countries over 12 months

## 3 Questions:

1. Which systemic shifts are needed to bring these transformations together ?

2. What does the current ecosystem of stakeholders look like ?

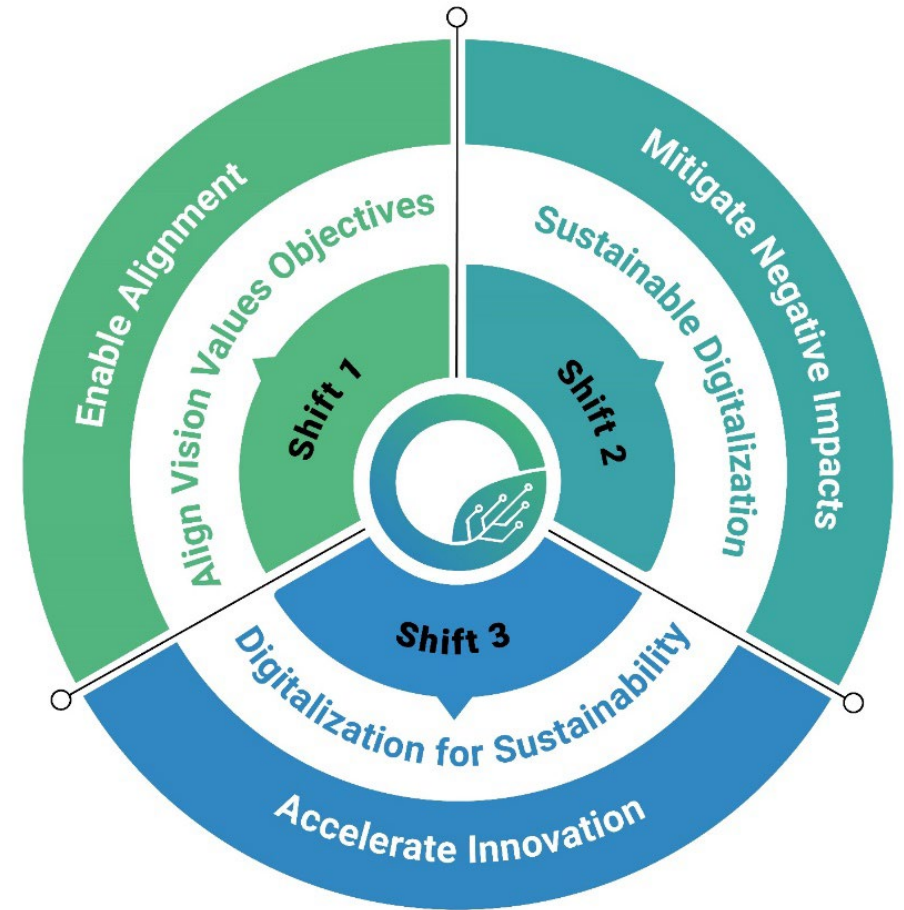

3. What are the gaps and needs for collective action for systemic impact?

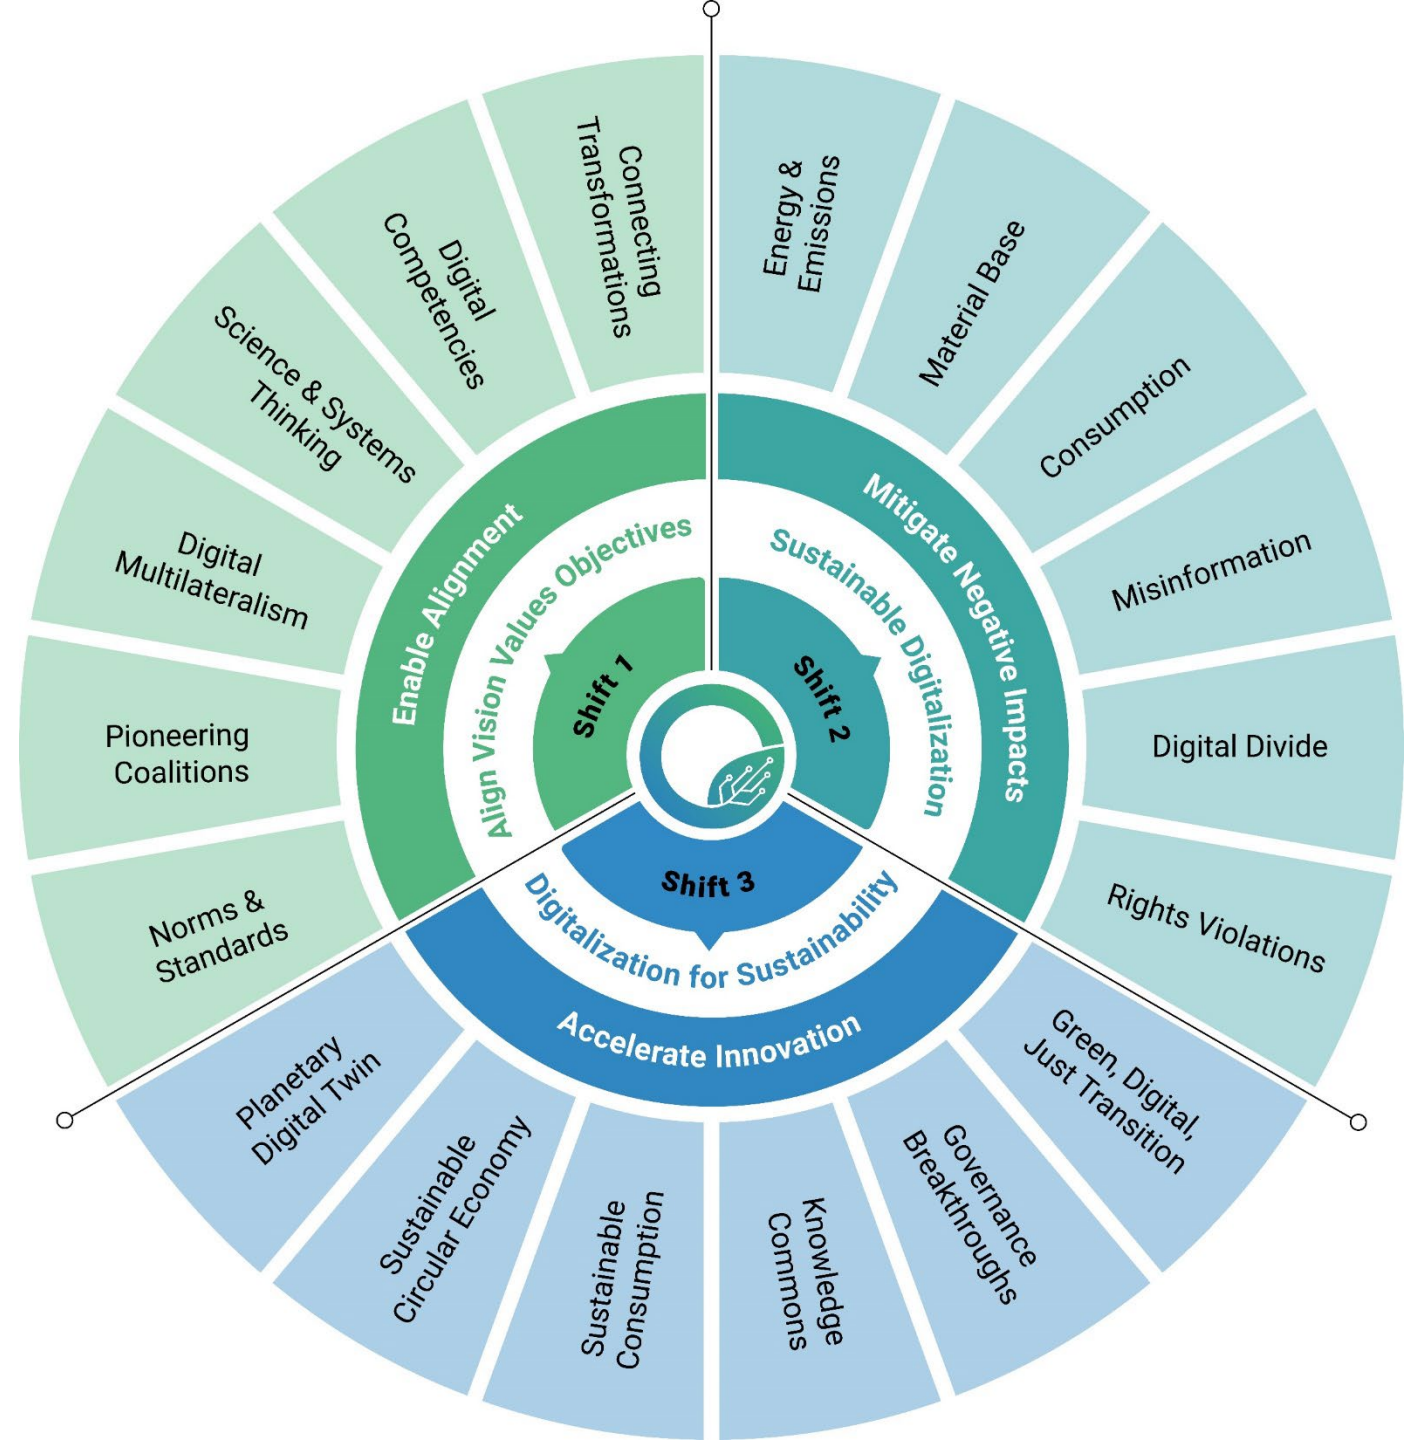

# Three important systemic shifts are underway by a range of stakeholders:

1. **Enable alignment:** vision, values and objectives of sustainable development with digitalization
2. **Mitigate negative impacts:** sustainable digitalization
3. **Accelerate innovations:** digitalization for sustainability

# Mapping 3 shifts to different strategic priorities by stakeholders

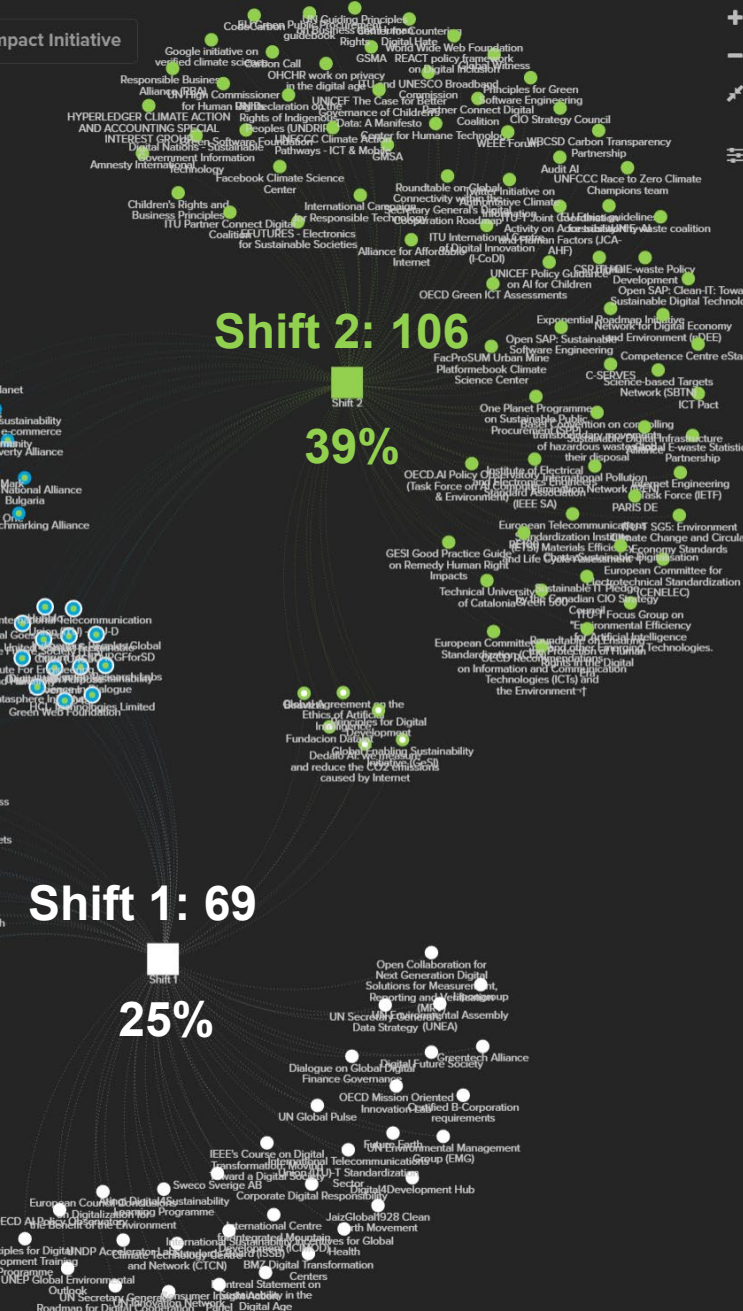

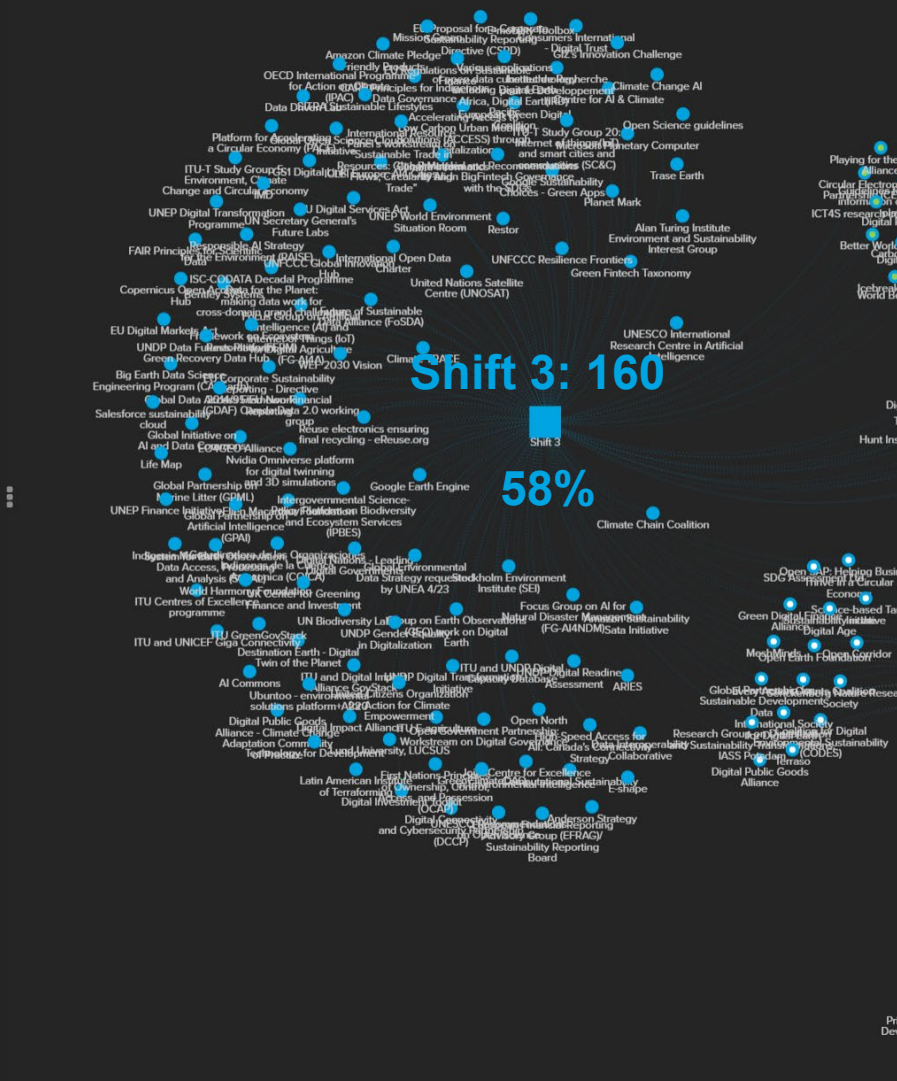

# Ecosystem map: 275 stakeholders working against the 3 shifts

**What is now  
needed to  
catalyze further  
systemic change  
through  
multi-stakeholder  
collaboration ?**

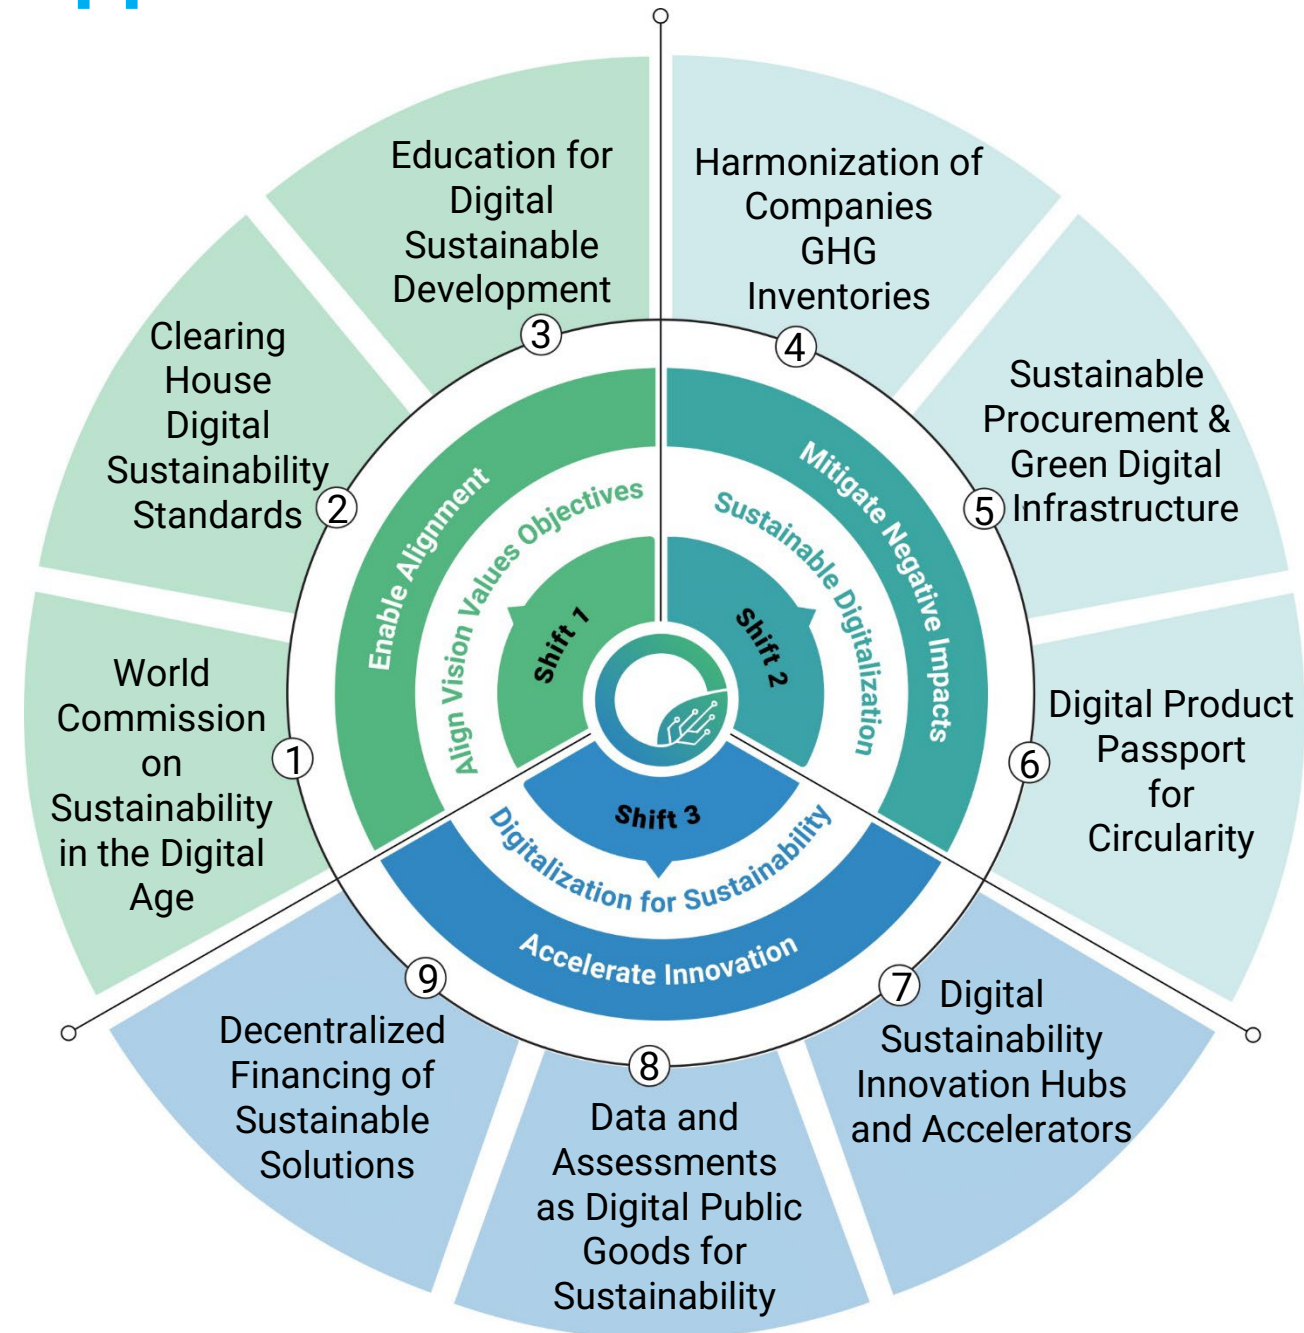

**9 IMPACT  
INITIATIVES**

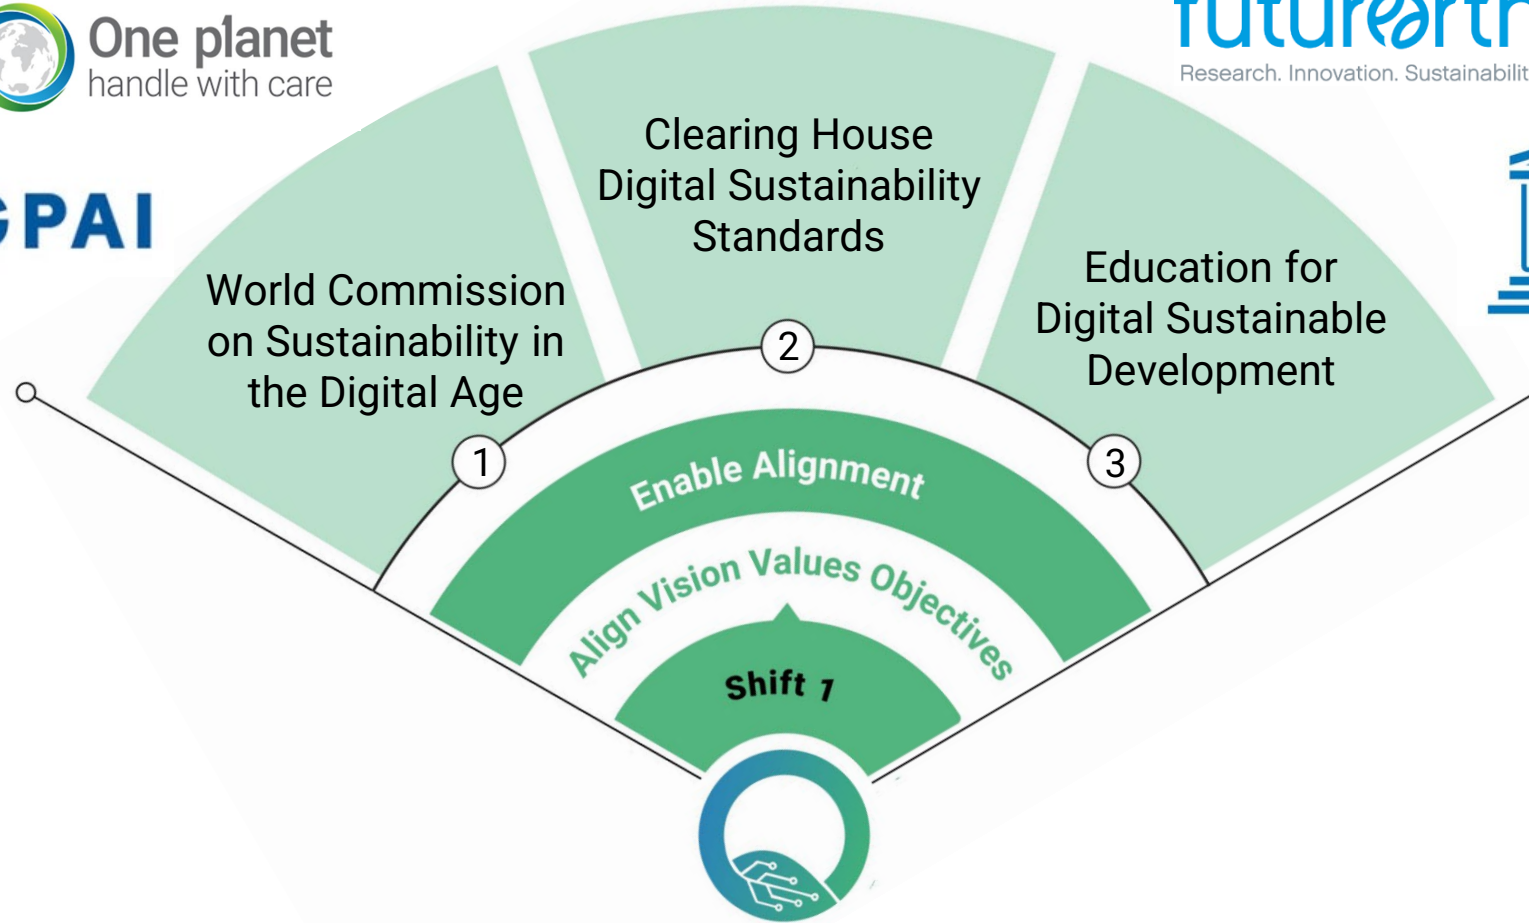

# Impact Initiatives: Criteria and Approach

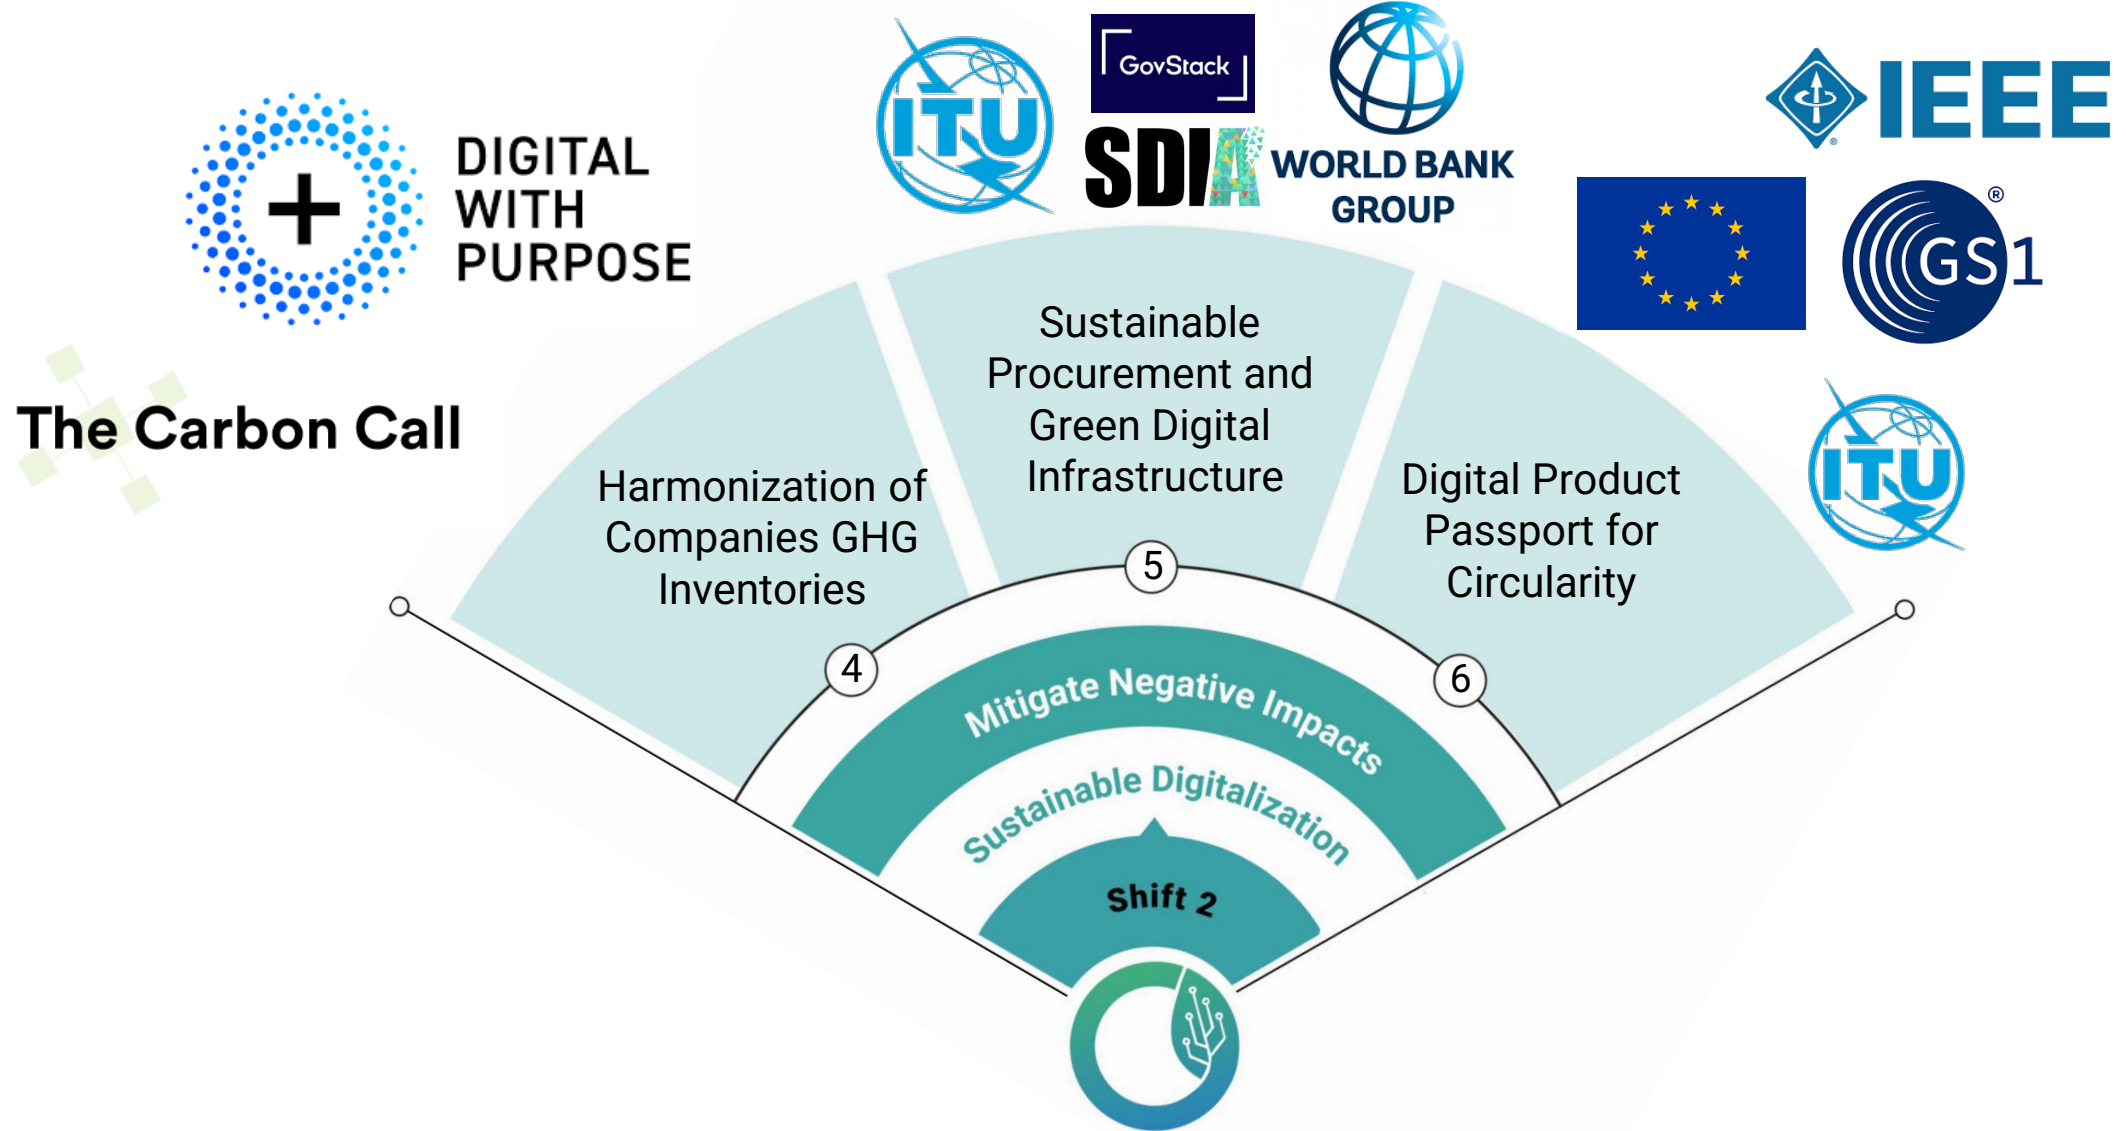

- **Catalyse systems level change**
- **Multi-stakeholder governance model per track**
- **Establish leadership entities per initiative and KPIs**
- **Improved coordination and cross-fertilization**
- **Multi-donor trust fund investment framework**

# Impact Initiatives for Shift 1: Enable Alignment

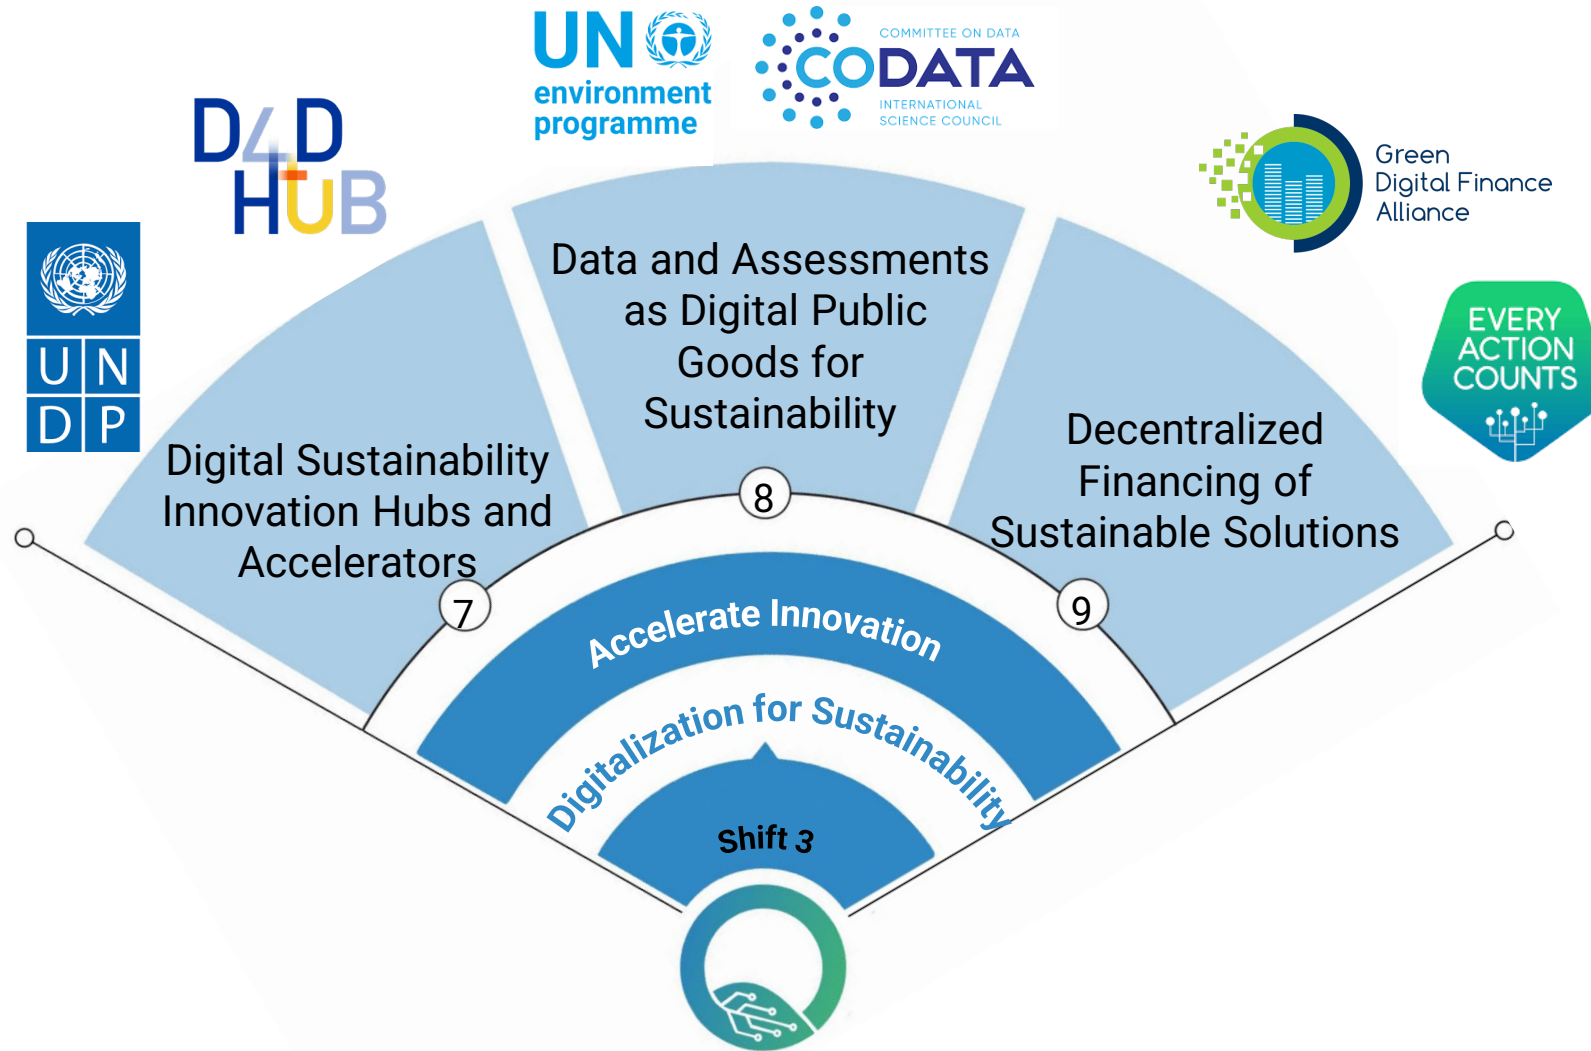

# Impact Initiatives for Shift 2: Mitigate negative impacts

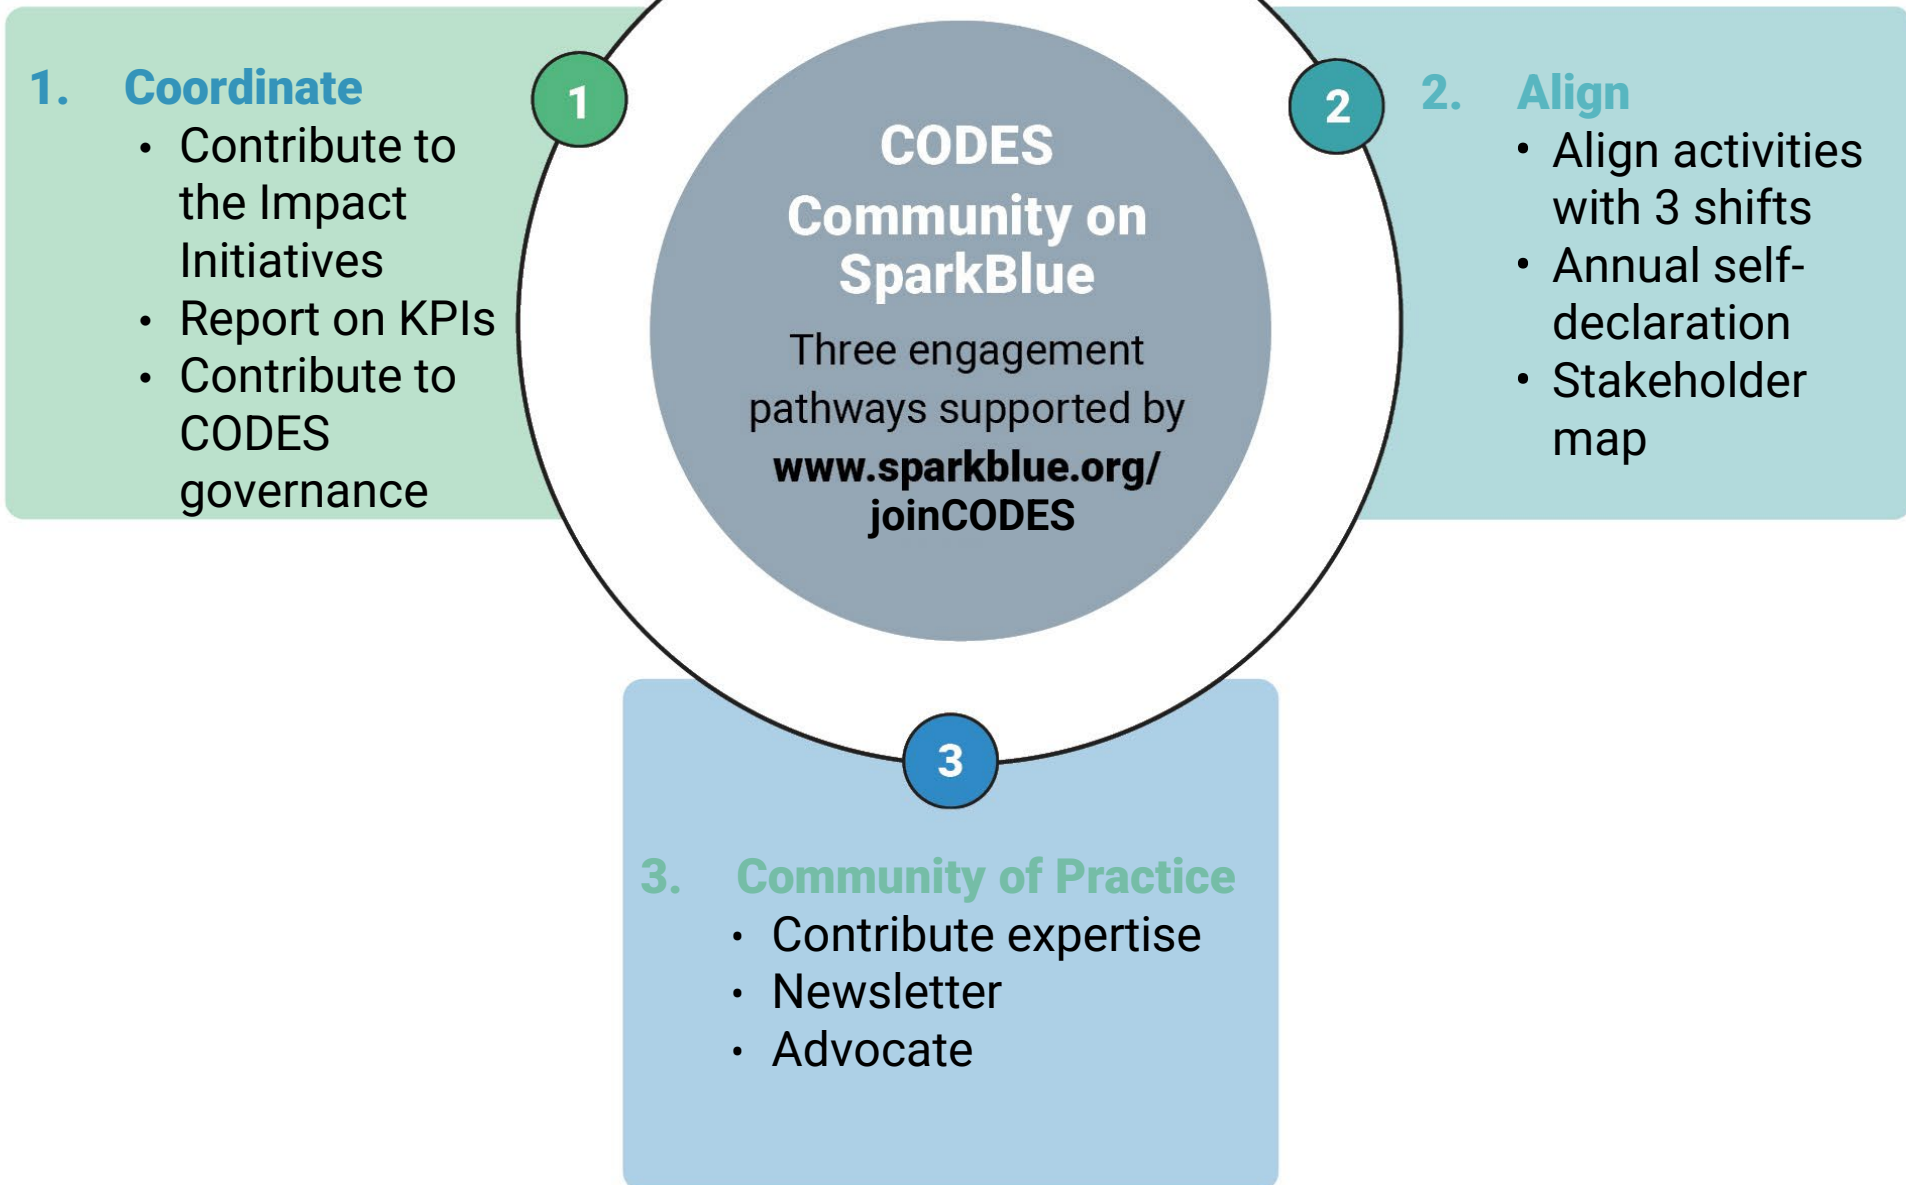

# Impact Initiatives for Shift 3: Accelerate innovations

# 3 Engagement Pathways

# On Your Radar: Summit of the Future – Digital Compact

## 3 Priorities:

1. Sustainability by design for all digital technologies
2. Sustainability by default for platforms
3. Sustainable business models that generate digital public goods
